

We Recommend Sherwood Foods

Drastically Less Litter-box Odor
and Lowered Risk for Urinary Sludge

Dissolves Urinary Sludge

Sludge problems? Dissolved!

The urinary support tablet helps dissolve urinary sludge and stones. A balanced diet will prevent sludge and stones from coming back.

The Urinary Support Tablet Works In 4 Specific Ways

Dissolves Urinary Sludge

A typical 5 to 10 fold drop in pH (0.5 to 1.0 units) increases calcium carbonate solubility (by removing carbonate) an average of 9 fold effectively dissolving urinary sludge.

Prevents Infection

Proanthocyanidins from cranberry inhibit bacterial adherence to cell walls in the urinary tract.

Flushes the Urinary Tract

Provides diuretic properties to increase urinary flow.

Reduces Urinary Oxalate

Boosted levels of vitamin B6 can help reduce urinary oxalate levels and prevent the formation of less common calcium oxalate stones.

How Many Tablets Does Your Pet Need Daily?

Severe Cases

For pets with severe urinary health problems
(Consult with your veterinarian)

1 tablet per pound of body weight daily

Moderate Problems

For a periodic flush

1/2 tablet per pound of body weight daily

Severe

*4 tablets/day

*Example for a
4 pound rabbit

Moderate

*2 tablets/day

Feeding Directions

For severe cases feed 1 tablet per pound of body weight split into two feedings per day. For milder urinary problems a half dose works well as a periodic flush.

We help you dissolve your pet's urinary sludge/stones and teach you how to prevent them from coming back.

Step 1: For better urinary health - PREVENTION

SHERWOOD Pets Make Better Urine.

Don't let sludge slow your pet down. Balancing their diet with Sherwood foods will help you prevent sludge buildup in your pet by minimizing the renal bicarbonate levels that cause sludge.... and reduce litter box odor! They will feel better and be healthier!

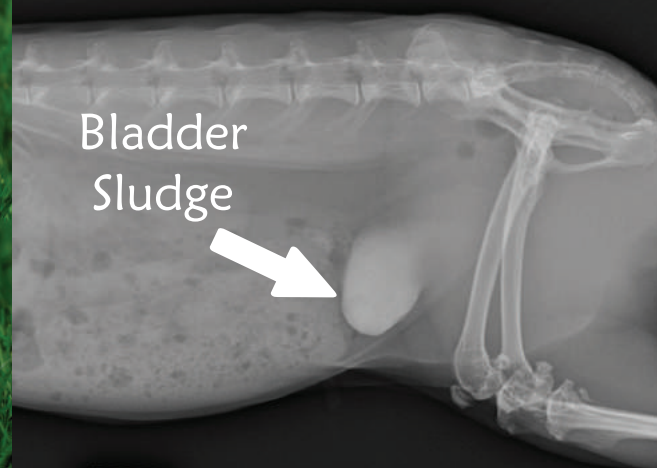

Step 2: For better urinary health - ACTIVELY DISSOLVE SLUDGE

Dissolved Sludge ★★★★★

“We were giving Mikey treatment for the sludge with metacam, subq fluids, and trying to express the bladder. The followup X-rays showed no improvements, even after vigorous fluid therapy. Then I stopped all that treatment and started giving him the tablets and within 10 days it cleared up.”
