We Recommend A Soy/Grain Free Diet

**Sherwood Pet Health**

- Premium Balanced Diets -  
Drastically Less Litter-box Odor  
and Lowered Risk For Urinary Sludge

Small Herbivores are adapted to a grass hay and legume hay based diet. This style of diet minimizes protein waste that would otherwise cause litter box odor and an increased risk for urinary sludge.

Avoid food and treats containing soy and soy by-products such as soybean meal. Also avoid those containing grain and grain by-products such as wheat flour, wheat middlings, oat middlings, maize (corn), or barley flour.

## Tip: Introducing the Vitamin C tablet for the first time?

Some pets are afraid of new food items such as this tablet. It is helpful to break it into smaller pieces the first time you feed it and even try mixing it with a favorite treat or leaving it in their nighttime home to explore it on their own overnight. It is also very concentrated and may take a few times for pets to get use to the strong flavor of the berries and sour tasting vitamin C in the tablet. Over 95% of guinea pigs learn to whistle and beg for this tablet!

## How Many Tablets Does Your Pet Need Daily?

Guinea Pigs require vitamin C. Chinchillas, rabbits and other pets make their own but may benefit from supplementation when stressed

**Adult Guinea Pig or Chinchilla**  
(1 tablet/day)

**4 Pound Rabbit**  
(2 tablets/day)

**6 Pound Rabbit**  
(3 tablets/day)

**8 Pound Rabbit**  
(4 tablets/day)

### Easy to Chew, No Added Sugar ★★★★★★

Posted by Dee

I have a chinchilla with dental problems, and it is nice that this Vitamin C tab is easy for him to chew. I also like the fact that it doesn't have any added sugars like other brands that have added sugars near the top of the list of ingredients. My chinnies love sweets, so they were a bit put off by these tabs at first. However, since they also like tart flavors, they quickly found that they love them and the tabs would disappear from their bowl overnight.

### Yummy C ★★★★★★

Posted by Hollie

Out of everything I have tried from Oxbow, to children's vitamin C all four of my guinea pigs have had issues then I found Sherwood Pet Health and was just literally an answered prayer all four of them just love their Vitamin C tablets and always look forward to getting their C everyday.

Two of them will do tricks just in excitement of getting their C my other two are still figuring that one out but will do sprints in their cage when they hear the bag. I couldn't have been happier and my piggies couldn't have been happier too.

Thanks so much Sherwood you guys are the best.

### Tasty C ★★★★★★

Posted by Cynthia

I've tried both human & pet liquid, tablet, & powder C supplements with food & in the water, even Tang as suggested by a rescue, & none have been well received. I was surprised & happy to see Hamish eagerly crunch these supplements up, tried one myself & it was not tart the way I expected, more herbal tasting which may be why he likes them so much.

Hamish gets Sherwood Guinea Pig pellets & fresh veggies/fruit, but he is a big hay eater, so these C supplements insure that he's getting enough in an affordable & convenient package.

**Active Ingredients:** Triple Berry Blend (Blue berry, Maqui Berry, Acai Berry), Banana, Ascorbic Acid (Vitamin C), Citrus Bioflavonoids.

**Inactive Ingredient:** Cellulose

25 mg of vitamin C per tablet  
(just right for a guinea pig)

### Feeding Directions

For guinea pigs feed 1 tablet per kilogram (2.2 pounds) of body weight once per day as a complete vitamin C supplement. Do not overfeed. Other species may benefit from periodic supplementation.

What are Bioflavonoids?

Bioflavonoids are plant pigments with antioxidant capacity. They have been used in alternative medicine as an aid to enhance the action of vitamin C and are being researched for their therapeutic effect in healing many diseases.
